

ARYAN SHARMA

Mumbai | +91 6006876919 | aryansharma5669@gmail.com | [GitHub](#) | [LeetCode](#)

SKILLS

Languages:	Java, JavaScript, TypeScript	Frontend:	React, Tailwind CSS
Backend:	Spring Boot, Node.js, REST APIs	Databases:	PostgreSQL, MongoDB, MySQL, pgvector
Dist. Systems:	Kafka, Apache Camel	Infra & Tools:	Git, AWS EC2, Redis, AWS Lambda, JGit
Concepts:	Microservices, API Design, Event-driven Architecture, Caching Strategies, System Design, RAG, LLM Integration		

EXPERIENCE

Software Engineer | Play Games24x7 (My11Circle)

April 2026 – Present

- Developed and launched the **Prediction Contest** feature end-to-end, contributing to a **10% increase in revenue** within the first quarter of release.
- Optimized backend systems for **My11Circle**, reducing API latency by **50%** by identifying bottlenecks in Fantasy Contest Flows through profiling and query optimization.
- Refactored core financial workflows by simplifying service architecture, cutting infrastructure and processing costs by **50%** while improving system reliability.
- Introduced **Redis caching** and local in-memory caching layers for prediction contest flows, cutting average response times by **40%**.
- Collaborated cross-functionally with product and QA teams to define APIs, write technical specs, and ensure zero-downtime deployments in a fast-paced release cycle.
- Leveraged AI-assisted development tools (**Cursor**, **Claude Code**) to accelerate day-to-day coding across feature development and bug fixes.

Specialist Programmer | Infosys

August 2024 – March 2026

- Built scalable backend microservices using **Spring Boot** and designed REST APIs optimized for low-latency integrations within the TDS 2.0 tax processing system.
- Implemented **Kafka-based** event-driven communication between services, improving fault tolerance, decoupling components, and enabling reliable asynchronous processing at scale.
- Developed routing and transformation pipelines using **Apache Camel** across 5+ heterogeneous systems, reducing integration complexity and standardizing inter-service communication.
- Optimized database interactions using advanced **JPA/Hibernate** techniques—lazy loading, batch fetching, native query tuning—reducing average query time by ~30%.
- Achieved **85%+ test coverage** by writing comprehensive unit and integration tests using **JUnit** and Mockito, reducing regression bugs in production.

PROJECTS

Git Archaeologist | Java, Spring Boot, JGit, PostgreSQL, pgvector, OpenAI API, Gemini 2.5 Flash

2026

- Built a Retrieval-Augmented Generation (RAG) system in **Spring Boot** that answers natural-language questions about a git repository's commit history, grounded with real commit citations.
- Used **JGit** to extract commit history into **PostgreSQL**, filtered low-signal commits, generated **OpenAI** embeddings with **pgvector** similarity search for retrieval, and synthesized cited answers using **Gemini 2.5 Flash**.

HTTP Server from Scratch | Java, TCP Sockets

2024

- Built an HTTP server from scratch using TCP primitives, capable of handling GET/POST requests, serving static files, and managing multiple concurrent connections via multithreading.

EDUCATION

B.E. Computer Engineering, Thapar University | CGPA: 8.43 | Elective: Data Science

2020 – 2024

Class XII – Non-Medical, Kendriya Vidyalaya Udhampur | 91%

2019 – 2020

ACHIEVEMENTS & CERTIFICATIONS

AWS Certified Cloud Practitioner | **Knight Rating on LeetCode** (Top 5% globally)
